Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

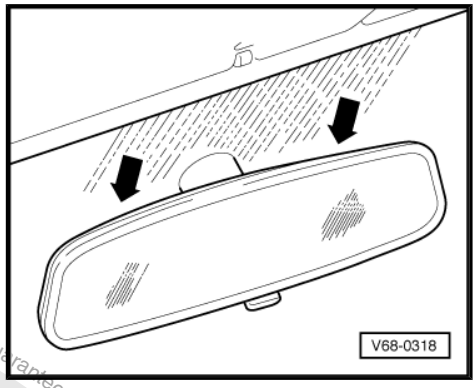
68 – Interior equipment

1 Interior mirror

1.1 Removing and installing interior mirror

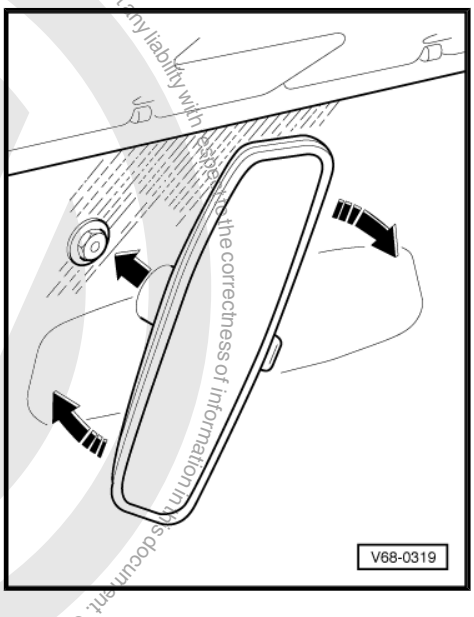
1.1.1 Removing

– Press interior rear-view mirror downward at an angle off retaining plate (spring clips in mirror base).



1.1.2 Installing

– When installing, push on mirror at 60... 90° angle to mounted position and rotate until locking spring clicks into place.

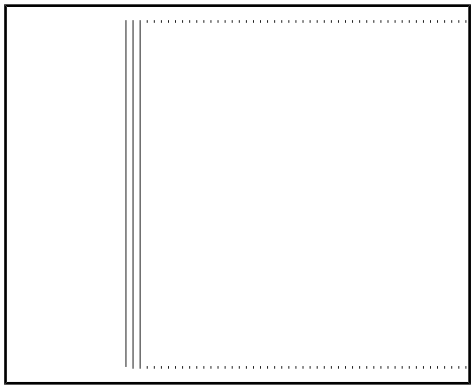


1.2 Bonding retaining plate for interior mirror

Materials

♦ Glass/metal bonding set -D 000 703 A1-

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



Tools

1 - Glass scraper (commercially available)

2 - Blade (commercially available)

Repair:

– Take mirror plate out from mirror base.

– Remove PUR adhesive from mirror plate with wire brush.

– Grind off the three spacer protrusions on bonding surface. To do this, use sandpaper (360/400 grain) laid on flat surface.

– Keep sanded surface clean and free of grease.

– Scrape down PUR adhesive material and primer down to ceramic layer on windscreen using glass scraper.

– Clean bonding area with adhesive remover -D 002 000 10- or cleaning solution -D 009 401 04- .

WARNING

Do not damage ceramic coating. Scratches will remain permanently visible.

– Cut nylon mesh fabric exactly to size of mirror base.

Note

Wear hand protection (rubber gloves).

– Apply adhesive evenly and smoothly to base of mirror.

– Fit nylon mesh fabric onto base of mirror.

– Apply further adhesive to nylon mesh fabric by dabbing with tube.

30 seconds are available for applying the adhesive to the nylon mesh fabric until pressing it onto the windscreen.

– Press base of mirror firmly (do not use force) against windscreen for 15 seconds.

– Remove excess adhesive with a cloth.

Note

Interior mirror can be installed after 15 minutes.

1.3 Automatic anti-dazzle interior mirror 10.99 ▸

1.3.1 Functional description

The automatic anti-dazzle interior mirror darkens continuously when the driver is blinded from behind.

It consists of a mirror element and electrics with two photo sensors.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

The photo sensors of the electronics detect the light incidence from the front and the rear.

If the light incidence is greater from the rear than from the front, the electronics apply voltage to the conductive coating.

The applied voltage changes the colour of the electrolyte. The greater the voltage, the darker the electrolyte. Therefore, the incident light is reflected to a lesser degree.

Selecting reverse gear switches off the anti-dazzle function. Consequently, one can, for example, reverse out of a dark garage with the aid of the interior mirror.

1.3.2 Assembly overview

1 - Interior mirror

- ❑ Testing function: switch on ignition. With reverse gear not engaged, cover photo sensor ⇒ Item 3 (page 3) and shine a hand torch at photo sensor ⇒ Item 2 (page 3) . The mirror must darken.

2 - Photo sensor

3 - Photo sensor

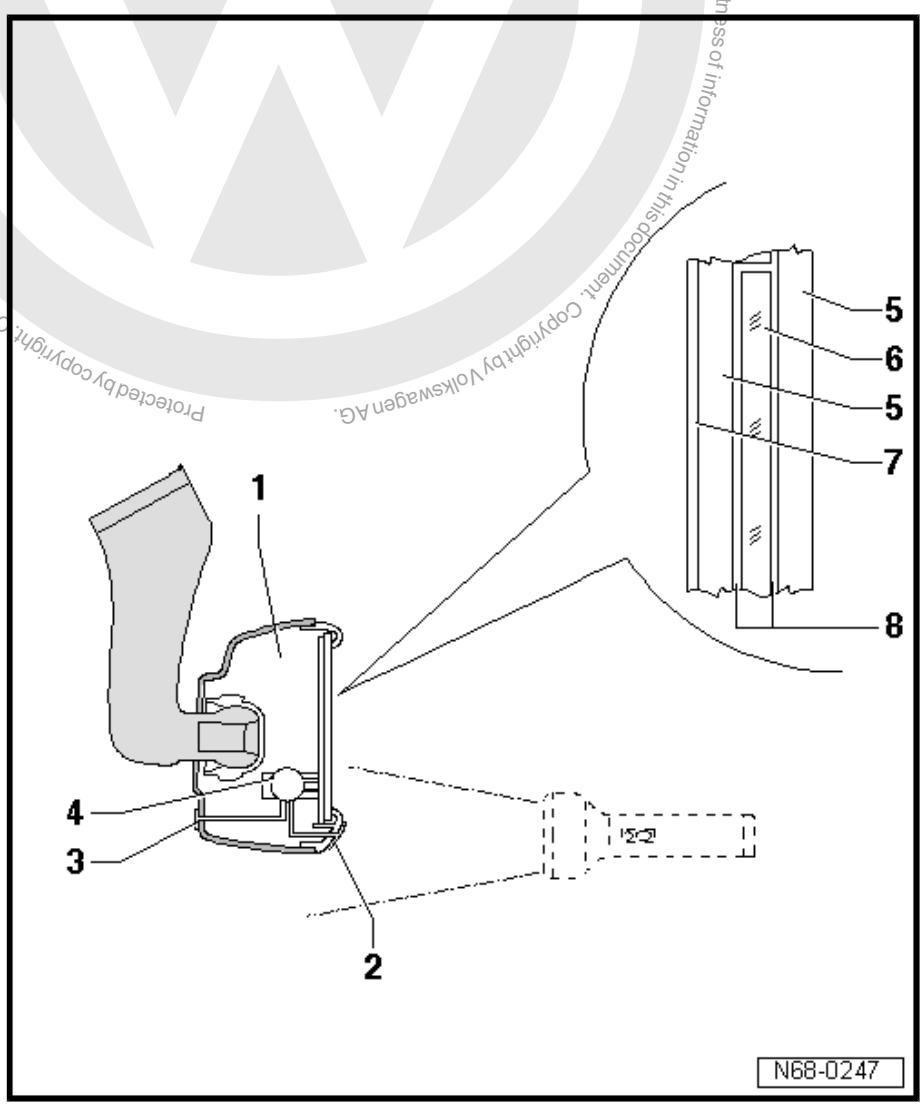
4 - Electronics

5 - Sheet of glass

6 - Electrolytic layer

7 - Silver reflecting coat

8 - Conductive coating



1.4 Removing and installing interior mirror (with rain sensor) 10.99 ▸

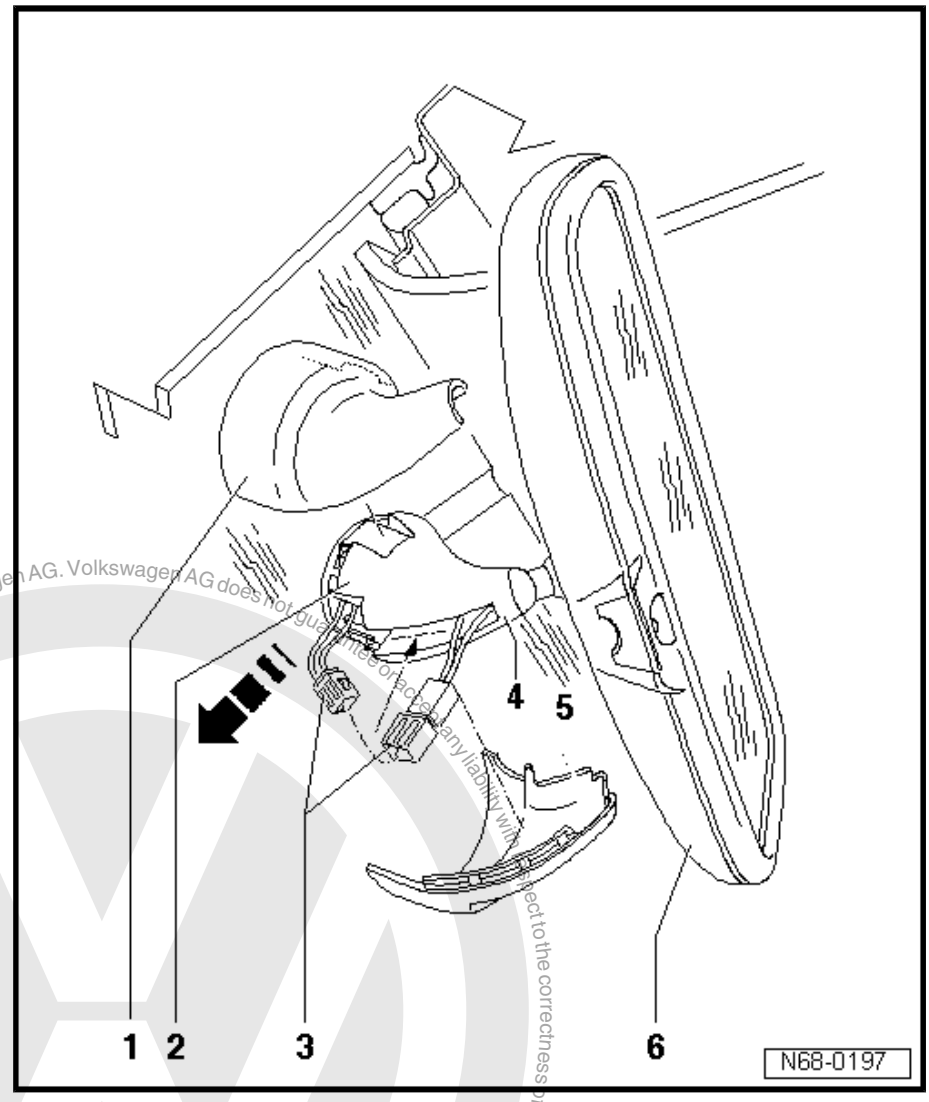
1.4.1 Removing

– Press left -1- and right -5- covers apart and remove.

– Pull connector -3- out of mirror base -4- and separate.

Protected by copyright. Copyright by Volkswagen AG.
satelettronica

– Pull mirror base -4- with mirror -6- downwards off retaining plate -2- -arrow-.



1.4.2 Installing

Installation is carried out in the reverse order.

1.5 Bonding on interior mirror base with rain sensor 10.99 ▸

The following repair procedure avoids the old procedure, renewing the windscreen.

At the same time, it is also possible to reuse the old mirror base which has fallen off.

1.5.1 Preparing windscreen

– All adhesive and primer residue must be removed from the ceramic pre-coating.

– Clean bonding area with cleaning solution -D 009 401 04- .

– Adhere to flash-off period of at least 10 minutes.

– Apply glass primer/paint primer -D 009 200 02- .

satelettronica

– Flash-off period up to bonding: minimum of 10 minutes to maximum of 1 hour.

1.5.2 Preparing detached or new mirror base

– Mechanically remove adhesive remains (applies only for a mirror base which has become detached).

– Prepare adhesive surface by sanding down with wet fine emery paper (800-1200 grade) until water does not run off surface to be bonded.

– Then clean with cleaning solution -D 009 401 04- .

1.5.3 Bonding mirror base

– Apply 2K polyurethane adhesive -D 180 KD2 A1- directly to sanded and cleaned mirror base bonding surface.

– Adhesive bead diameter: Approx. 2.5...3 mm.

– Press mirror base into position on prepared windscreen immediately after applying adhesive to base.

– Align mirror base in position on ceramic pre-coat surface and secure with adhesive tape.

1.5.4 Cleaning and removing excessive adhesive

– 0,5... Carefully remove adhesive tape after 0.5...1 hour after attaching mirror base.

– Remove excessive and still soft adhesive from around mirror base using a spatula.

– Then remove remaining excessive adhesive completely using a cloth or primer applicator soaked in cleaning solution.

1.5.5 Installing rain sensor and mirror

– Mirror can be fitted 2.5 hours after attaching mirror base.

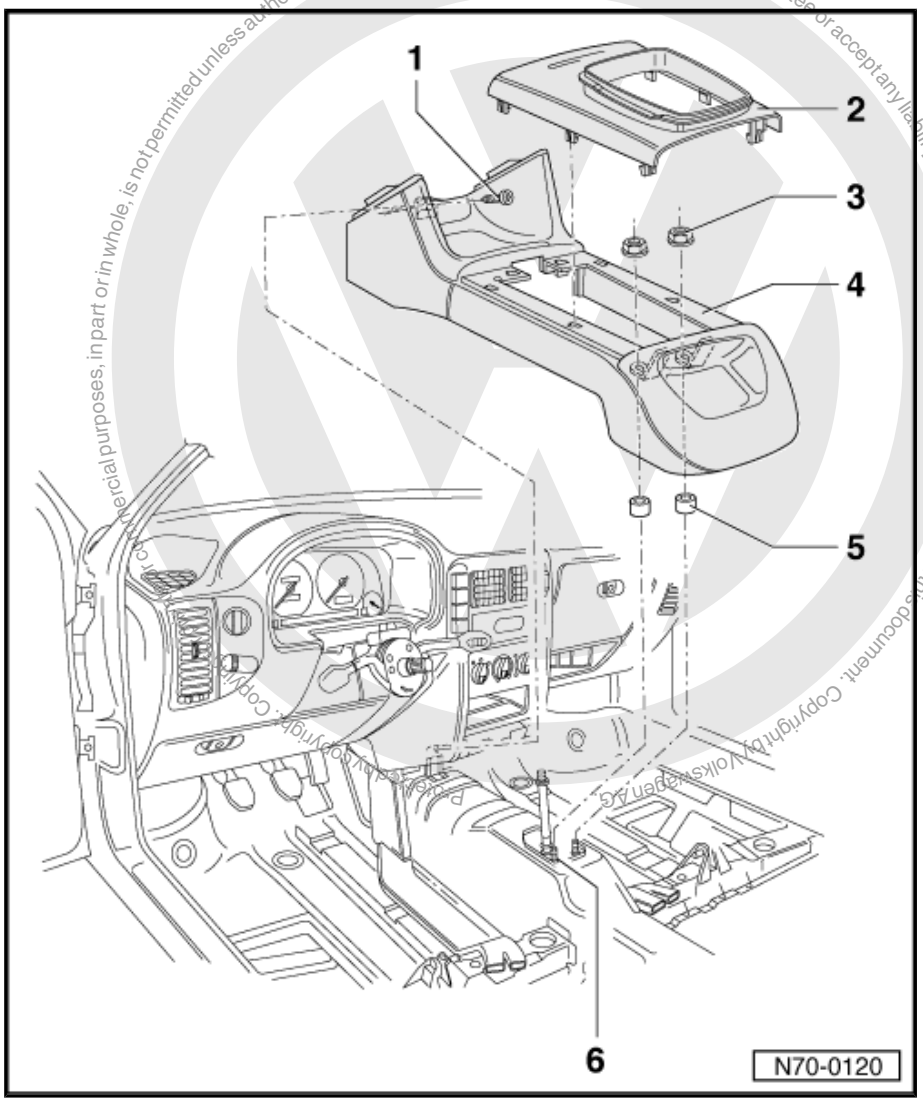
2 Compartments, covers and trims

2.1 Removing and installing centre console ▸ 09.99



1 - Cross-head screw

- ❑ 1.5 Nm

2 - Cover

- ❑ Clipped.

3 - Hexagon nut

- ❑ 2 Nm

4 - Centre console

- ❑ Removing:
  - – Unclip cover ⇒ Item 2 (page 6) and take off upwards.
  - – Unscrew hexagon nuts ⇒ Item 3 (page 6) .
  - – Remove cross-head screw ⇒ Item 1 (page 6) .
  - – Lift rear of centre console from studs ⇒ Item 6 (page 6) and lift from gear lever.
- ❑ Installing:
  - – Place spacer sleeves ⇒ Item 5 (page 6) onto studs ⇒ Item 6 (page 6) .
  - – Insert centre console, secure with cross-head screw ⇒ Item 1 (page 6) and hexagon nuts ⇒ Item 3 (page 6) .

5 - Spacer sleeve

6 - Stud

2.2 Removing and installing centre console 10.99 ▸

Note

The removal and installation procedures may have to be modified slightly depending on equipment variants.

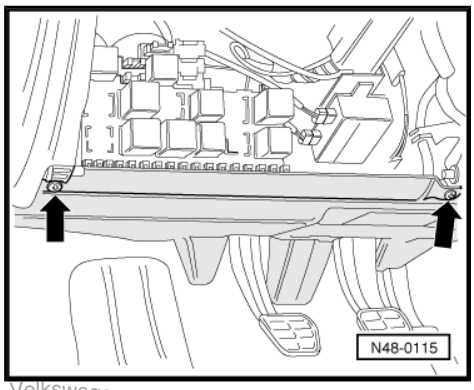
2.8 Removing and installing footwell cover on driver side

2.8.1 Removing

– Remove cross-head bolts -arrows-.
– Remove driver's footwell cover.



2.8.2 Installing

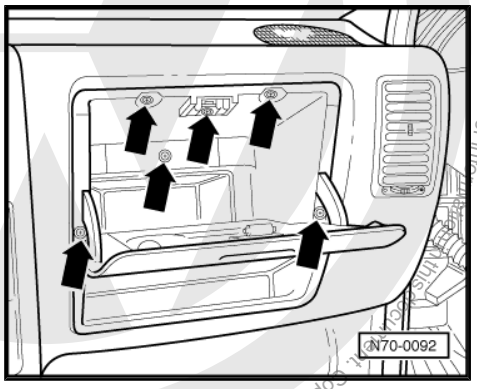
– Installation is carried out in reverse order of removal.

2.9 Removing and installing glove box ▸ 09.99

2.9.1 Removing

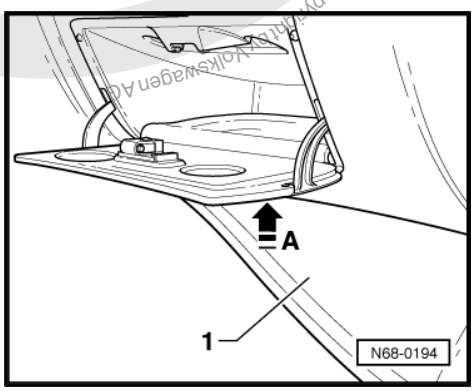
Vehicles without passenger airbag

– Open glove box.
– Remove cross-head bolts -arrows-.
– Pull glove box with storage compartment out of dash panel.



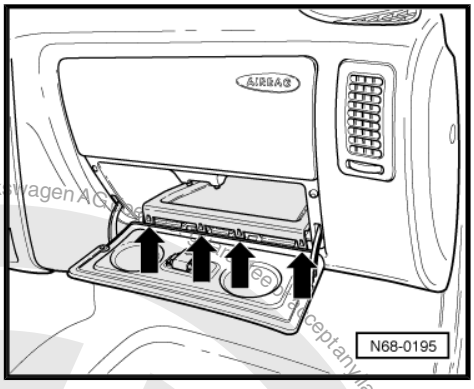
Vehicles with passenger airbag

– Open glove box.
– Pull trim under glove box -1- down.
– Grip behind dash panel with hand -arrow A-.

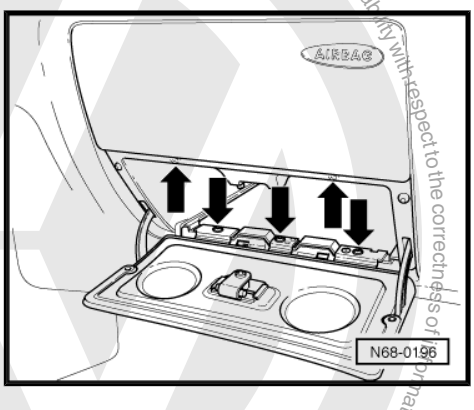


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information.
Copyright by Volkswagen AG
satelettronica

– Release front tabs on felt insert and press out of mounting bracket -arrows-.
– Push felt insert up with hand and then pull out forwards.



– Remove Torx screws -arrows-.
– Remove glove box.



2.9.2 Installing

– Installation is carried out in reverse order of removal.

2.10 Removing and installing glove box 10.99 ▸

2.10.1 Removing

– Remove driver side storage compartment 10.99 ▸ ⇒ page 15 .
– Remove centre console 10.99 ▸ ⇒ page 6 .
– Remove three screws -arrows-.
– Open glove box.

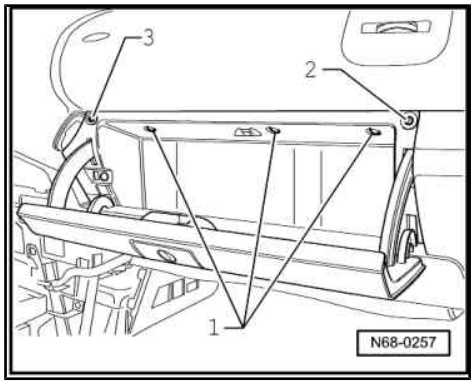
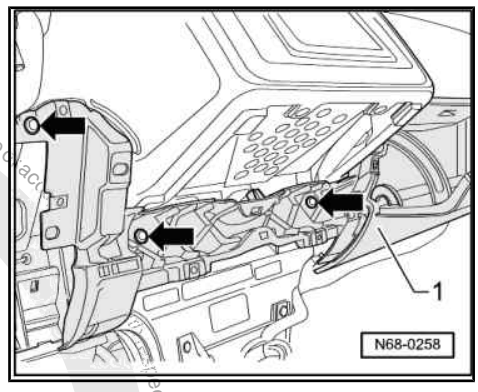
satelettronica

– Remove the three screws -1-.
– Unscrew stop buffers -2- and -3-.



– Remove three screws -arrows-.
– Remove glove box.



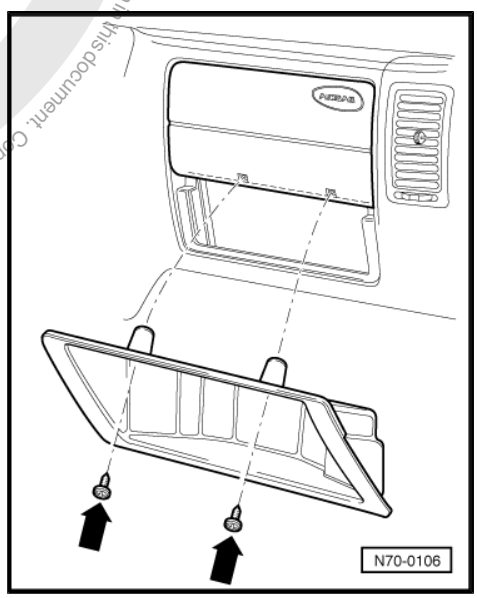
2.10.2 Installing

– Installation is carried out in reverse order of removal.

2.11 Removing and installing passenger side storage compartment ▸ 09.99

2.11.1 Removing

– Remove cross-head bolts -arrows-.
– Pull front passenger side compartment out of dash panel.



2.11.2 Installing

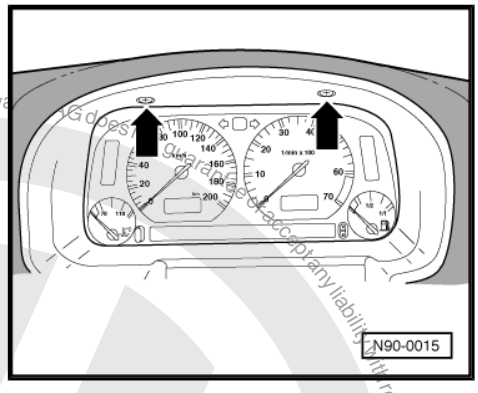
– Installation is carried out in reverse order of removal.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

2.12 Removing trim for dash panel insert ▸ 09.99

2.12.1 Removing

– Remove cross-head bolts -arrows-.
– Pull out trim for dash panel insert.



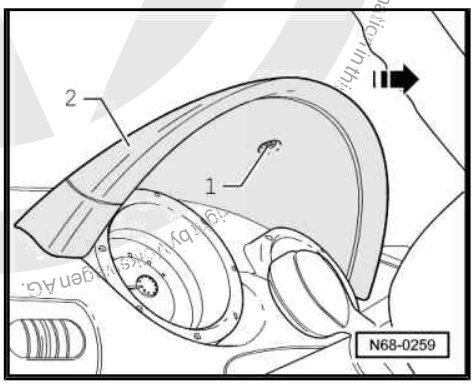
2.12.2 Installing

– Installation is carried out in reverse order of removal.

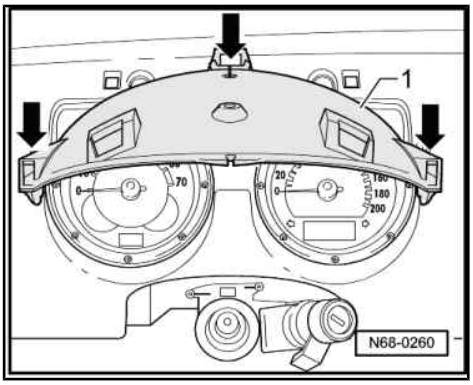
2.13 Removing trim for instrument cluster 10.99 ▸

2.13.1 Removing

– Remove bolt -1-.
– Unclip upper part of instrument trim panel -2- in -direction of arrow-.



– Remove three screws -arrows-.
– Remove instrument trim panel -1-.



2.13.2 Installing

– Installation is carried out in reverse order of removal.

69 – Passenger protection

1 Seat belts

1.1 Safety regulations for belt tensioners

- Testing, removing, installing and repair work may only be performed by qualified personnel.
- Belt tensioner components may be neither opened nor repaired; always use new parts (danger of accident).
- Belt tensioner units which have received hard blows or been dropped on the floor must not be installed in vehicles.
- Belt tensioner units which are mechanically damaged (dents, fractures) always must be renewed.
- Storage and transportation are subject to laws governing explosive substances.
- Belt tensioner unit must be installed immediately after removal from its packaging.
- No tools with impact action may be used to remove the belt tensioner.
- If work is interrupted, the belt tensioner unit must be returned to its packaging.
- Leaving the belt tensioner unit unattended is prohibited.
- The belt tensioner unit must not be treated with grease, cleaning or similar substances, nor may it be exposed to temperatures above 100 °C, even for short periods.
- The pyrotechnic propellant has no expiration date; i.e. it has unlimited, maintenance-free life.

1.2 Disposal of belt tensioner units

- Non-triggered belt tensioner units with a pyrotechnical charge must, according to national legislation, be disposed of correctly in the original packaging. If in doubt, contact your distribution centre or importer for details.
- Used belt tensioner units can be disposed of via commercial waste disposal.

1.3 Checking belt tensioner

– Unreel seat belt webbing.

If the belt webbing can still be unrolled or rolled up on a triggered mechanical belt tensioner, rattling noises can be clearly heard.

If an electric belt tensioner has been triggered, a fault will be saved in the airbag fault memory.

If a belt tensioner has been triggered, the entire seat belt must be renewed.

satelettronica

2 Inspecting seat belts

WARNING

The seat belt system must be inspected systematically after every accident! If damage is determined at any of the points to be checked, customer must be informed regarding necessity of changing belts.

Check points:

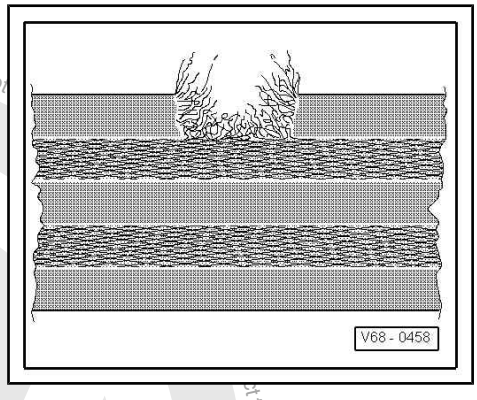
- Checking belt webbing
- Checking inertia reel (locking mechanism)
- Visually checking belt buckle
- Checking operation of belt buckle
- Checking belt anchors, belt guides and latch plates
- Checking securing parts and anchorage points

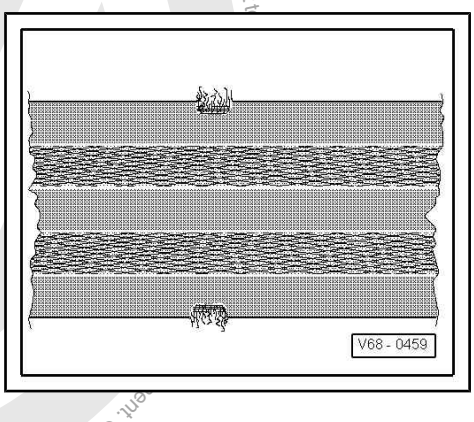
2.1 Points to check

2.1.1 Checking belt webbing

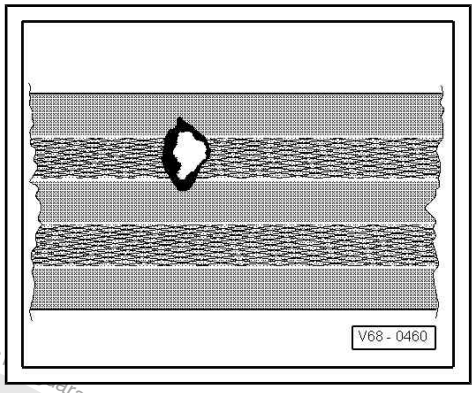
– Pull belt webbing completely out of inertia reel.

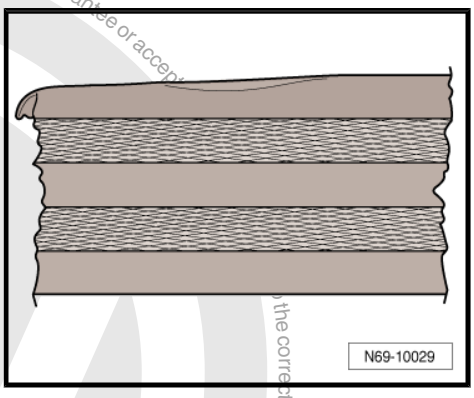
– Inspect belt straps for soiling and, if necessary, wash with mild soap solution ⇒ also refer to Owner's Manual.





Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not
Copyright by Volkswagen AG.
satelettronica





- If either of the following illustrated damage examples (1 and/ or 2) are found on accident vehicle - renew seat belt complete with belt buckle and belt height adjustment.
- If damage as illustrated under points 1, 2, 3 and/or 4 is determined on a vehicle which has not been involved in an accident, it is sufficient to renew damaged belt only.
- Belt webbing cut, torn or chafed.
- Torn webbing loops on edge belt.
- Burn marks from cigarettes or similar.
- One edge of belt deformed or wavy.

2.1.2 Checking inertia reel (locking mechanism)

The inertia reel has two locking functions.

♦ The first locking function is triggered by the belt being jerked out of reel (belt extraction acceleration).

Checking

– Pull belt out of inertia reel with firm jerk.

- Will not lock - renew seat belt complete with buckle.
- If difficulties are experienced when belt is extended or retracted, first check whether position of inertia reel has been altered.
- The second locking function is triggered by a change in vehicle speed (vehicle-dependent locking function). Vehicle must be moved over a flat level surface for this.

Checking

– Put on seat belt.

– Accelerate vehicle to 20 km/h and then carry out emergency braking with foot brake.

- If seat belt is not locked by locking mechanism during braking procedure, renew seat belt complete with buckle.

> ⚠ WARNING
>
> *For safety reasons, the road test should be carried out on a traffic-free stretch to ensure that other road users are not endangered.*

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Reproduction, copying or publication for private or commercial purposes, in part or in whole, is not permitted without the express consent of Volkswagen AG.
satelettronica

2.1.3 Visually checking belt buckle

– Inspect belt buckle for cracks and chips.

• If damage is determined, renew seat belt complete with belt buckle.

2.1.4 Checking operation of belt buckle

Checking belt buckle:

– Push latch plate into belt buckle until it engages audibly. Check whether locking mechanism is properly engaged by pulling firmly on belt webbing.

• If latch plate fails even once to engage properly in belt buckle during at least 5 tests, renew seat belt complete with belt buckle.

Checking release mechanism:

– Release seat belt by pressing button on belt buckle with finger pressure.

– When belt is slack, latch plate must spring out of belt buckle on its own.

• Carry out test at least 5 times. If latch plate fails even once to spring out of buckle, renew seat belt complete with belt buckle.

WARNING

Under no circumstances whatsoever may lubricant be used to eliminate noise or stiffness in belt buckle buttons.

2.1.5 Checking belt anchors, belt guides and latch plates

Plastic-coated hardware show fine, parallel scoring after stress on belt system (when belt was fastened during accident). (On the other hand, wear caused by frequent belt use can be recognized by smooth wear, free of lines).

– Inspect for deformation, fracturing and cracks in plastic.

• If scoring and/or damage is determined, renew seat belt complete with belt latch.

2.1.6 Checking securing parts and anchorage points

♦ Latch tongue deformed (stretched)

♦ Height adjuster non-functional

♦ Anchorage points (seat, pillars, vehicle floor) distorted or thread damaged

• If damage is determined on these parts, renew seat belt complete with belt buckle.

• Renew anchorage points.

Note

In case of damage resulting not from an accident, but for example, from wear, only the part which is actually damaged need be renewed.

3.3 Safety precautions when working on the airbag

- ♦ Testing, removing, installing and repair work may only be performed by qualified personnel.
- ♦ Before working on the airbag system, disconnect the battery earth strap. No waiting time is necessary after disconnecting the battery. When the airbag system is connected to a voltage source, no person must be present inside the vehicle.
- ♦ Before picking up (touching) the airbag unit, the mechanic must electrostatically discharge him/herself. This can be done by touching a suitable metal part, for example, a water pipe, a heater pipe or a metal frame.
- ♦ Airbag units must be installed immediately after they are removed from their packaging.
- ♦ If work is interrupted, the airbag unit must be replaced in its packaging.
- ♦ Leaving airbag unit unattended is prohibited.

satelettronica

- Removed airbag units must be stored with the padded side facing up.
- Airbag units which have been dropped onto a hard surface or show signs of damage must not be installed in the vehicle.
- Storage and transportation are subject to laws governing explosive substances.

3.4 Disposal of airbag units

- Non-triggered airbag units must, according to national legislation, be disposed of correctly in the original packaging. If in doubt, contact your distribution centre or importer for details.
- Used airbag units can be disposed of via commercial waste disposal.

3.5 Deactivating the airbag

WARNING

The prerequisites for deactivating one or more airbag units have been published in the "Technical Service Handbook".

In the "Technical Service Handbook 2", the "Procedure ID" or the "TPL number" for the deactivation of airbag units: "2000987".

3.6 Renewing airbag units following an accident

3.6.1 Accident involving triggering of airbag

Following the renewal of airbag units or the airbag control unit, the labels (only tear-off strips) of the new components must be stuck onto the "Registry note 2 for Airbag Systems". For registration, the "Registry note 2 for Airbag Systems" must be sent on to the responsible distribution centre or importer.

The "Registry note 2 for Airbag Systems" can be printed out of the "Technical Service Handbook":

satelettronica

→ Passenger protection

→ Deactivation of airbag units

→ Systems

In the “Technical Service Handbook 2”, the “Procedure ID” or the “TPL number” for this procedure: “2000987”.

As a matter of rule, the following components will have to be renewed following an accident where the airbag has been triggered:

- All triggered airbag units with control units and sensors.
- Supports for front passenger module if front passenger airbag was triggered.
- Coil connector with slip ring, when driver airbag has triggered.
- All seat belts with triggered belt tensioners.
- In addition, the following must also be replaced if necessary (visual check): All damaged components.

3.6.2 Accident not involving triggering of airbag

- If the airbag warning lamp (K 75) does not indicate a fault, it is not necessary to replace the airbag components. The seat belts should be checked separately.

3.7 Removing and installing driver side airbag unit ▸ 09.99

Note

- *Obtain radio unit code before disconnecting battery.*
- *After reconnecting the battery, ensure vehicle equipment (radio, clock, electric windows) are checked as per Workshop manual/Owner's manual.*

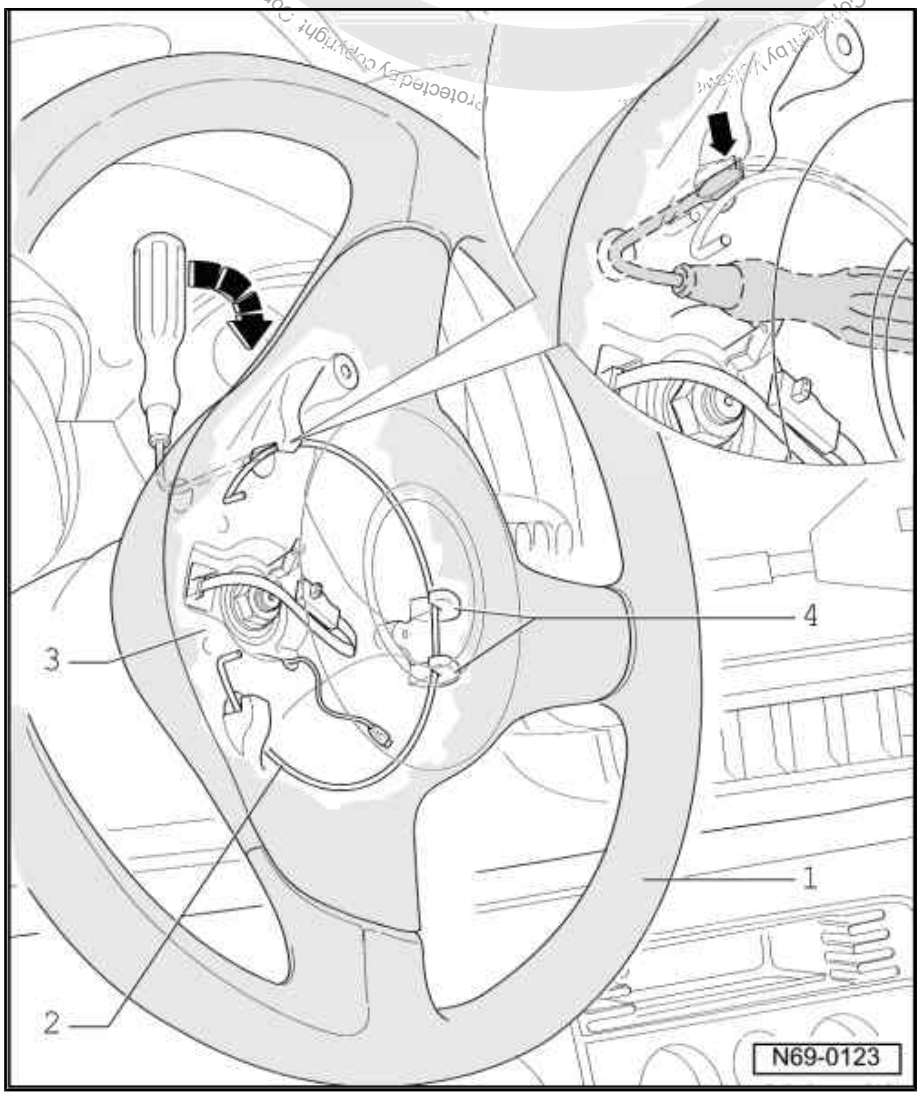
- Turn steering wheel -1- until horizontal spokes are vertical. Pull out steering column completely and press down to lowest position.
- Insert a screwdriver, about 5 mm wide and angled to a length of 55 mm, in hole on back of steering wheel hub.
- Turn screwdriver 90°, circlip -2- is pressed off lug in steering wheel hub and airbag unit is released on this side.
- Turn steering wheel back 180° and release second retaining hook on opposite side.
- Grip airbag unit by horizontal spokes and lever out of vertical anchorage.

> ⚠ **WARNING**
>
> ***Electrostatic discharges may result in unintentional triggering of airbag. Therefore, the mechanic must electrostatically discharge him/herself before disconnecting the igniter and earth wires. This can be done by briefly touching the body or striker plate of the door.***

- Pull connectors off airbag unit.

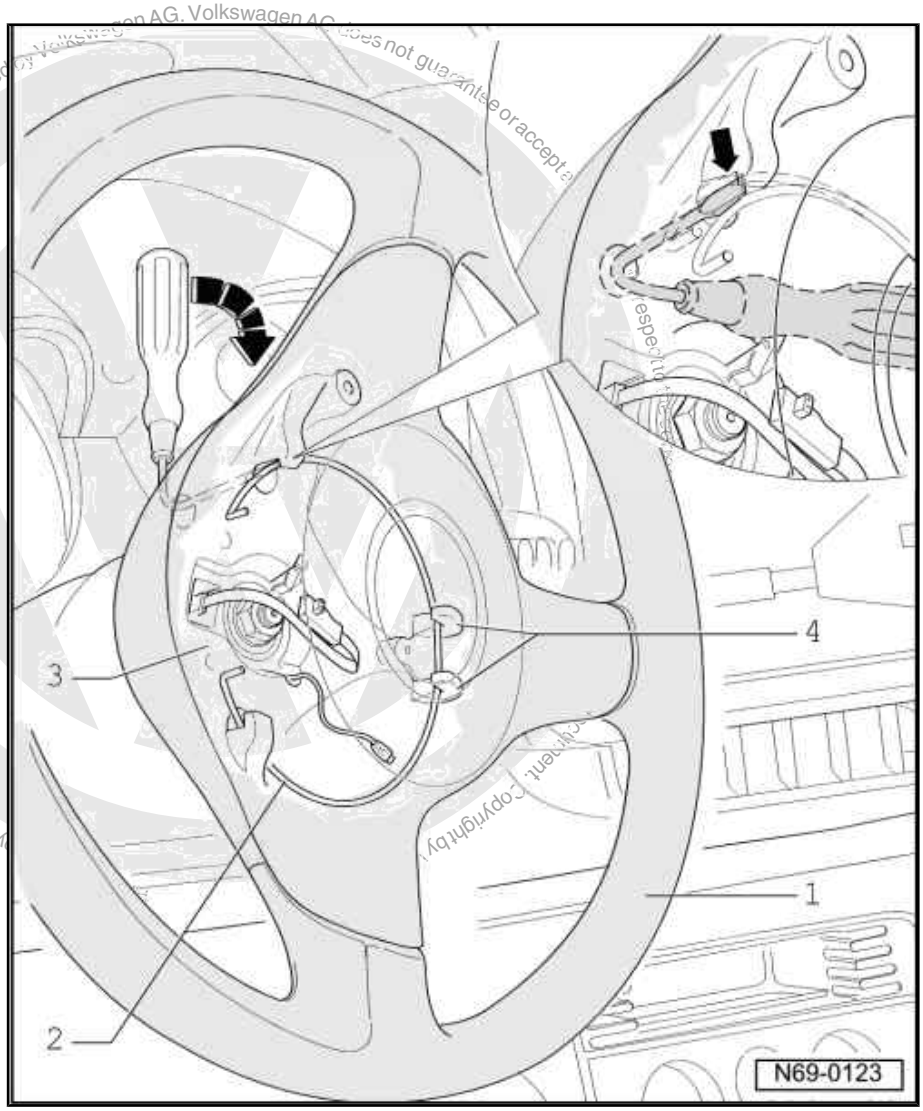


satelettronica

3.8.3 Installing

– Connect connectors to airbag unit.

– Set airbag unit to installation position. Press on airbag unit, first in horizontal, then in vertical spoke area, until it engages.



– Switch on ignition.

> ⚠ **WARNING**
>
> ***When connecting the battery earth strap ensure no person is in the vehicle.***

– Connect battery earth strap.

3.9 Removing and installing steering wheel ▸ 09.99

3.9.1 Removing

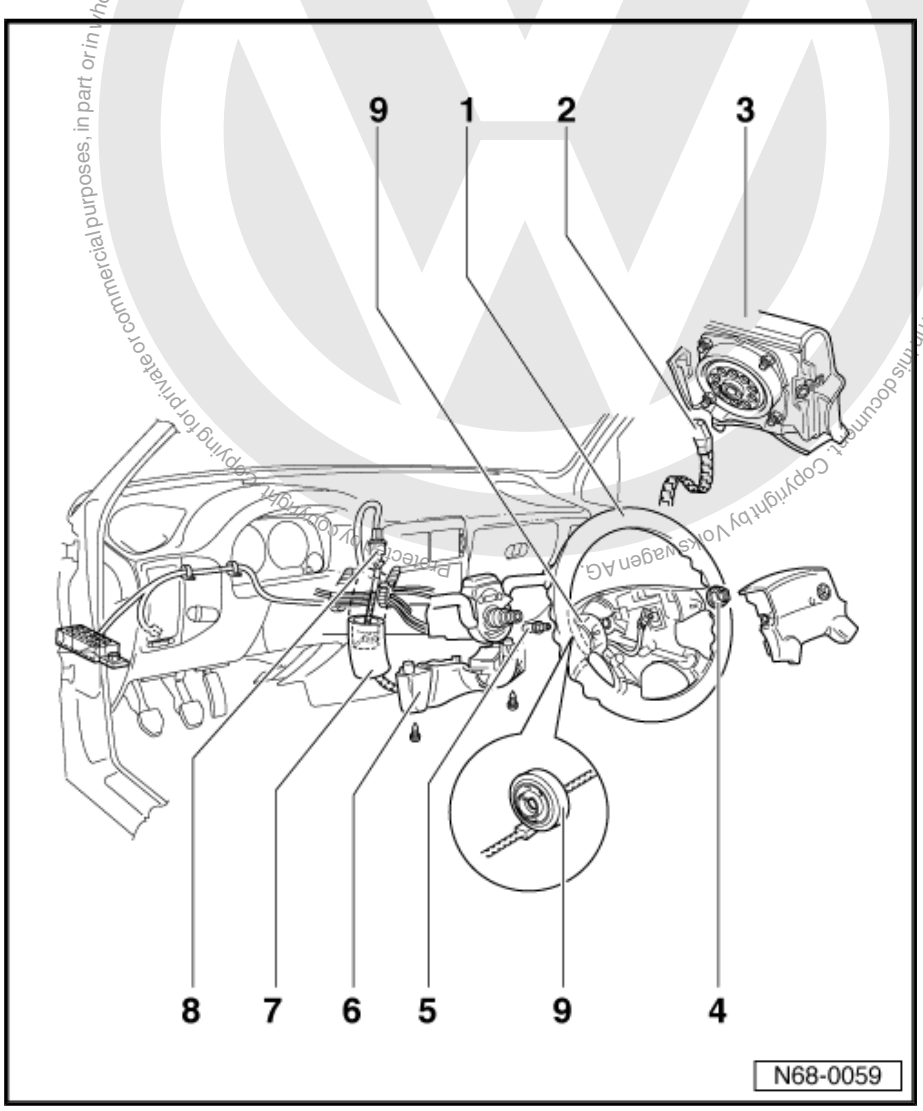
– Remove driver airbag unit ⇒ page 40 .

satelettronica

– Unscrew bottom part of trim -6- for steering column switch.
– Pull foam tube -7- off the connector -8- and separate connector.
– Unscrew hexagon nut -4- and pull steering wheel off the steering column (hexagon nut 50 Nm).

Note

Coil connector with slip ring -9- remains on the steering wheel.



3.9.2 Installing

Installation is carried out in reverse order of removal.

satelettronica

3.10.3 Installing

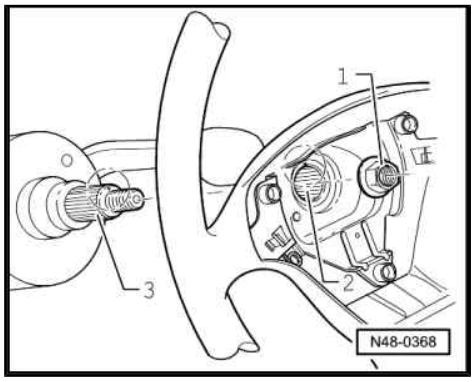
– Set steering wheel on so that lines on steering wheel hub -2- and punch marks on steering column -3- align.

Steering columns supplied as spare parts have no punch marks.

Following wheel alignment or a test drive, these must be identified.

Tightening torques:

Hexagon collar nut to steering column -1-	50 Nm



satelettronica

3.11 Removing and installing coil connector with slip ring ▸ 09.99

Note

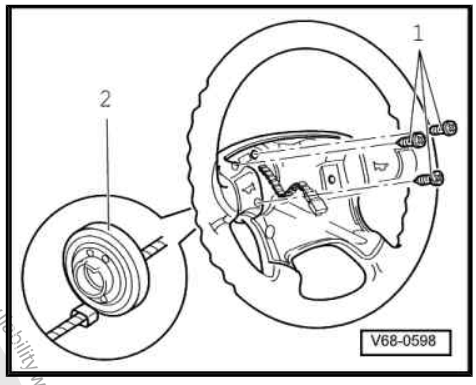
- *The steering must be in the centre position (wheels in straight-ahead position) when the coil connector and slip ring are removed and installed.*
- *As a new part the coil connector with slip ring is secured in the centre position by a cable tie.*

3.11.1 Removing

Driver side airbag unit and steering wheel removed.

– Separate single connector for horn.

– Unscrew Phillips screws -1- and pull coil connector with slip ring -2- off the steering wheel.



3.11.2 Installing

Installation is carried out in reverse order of removal.

3.12 Removing and installing coil connector with slip ring 10.99 ▸

Note

- *When removing and installing return spring with slip ring, ensure that return spring is in centre position.*
- *As a new part the coil connector with slip ring is secured in the centre position by a cable tie.*

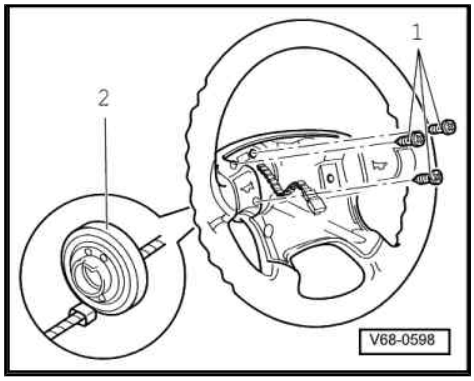
3.12.1 Removing

- Driver side airbag unit, steering wheel and lower steering column switch trim removed.

– Disconnect single connector for horn and connector for coil connector with slip ring.

satelettronica

– Unscrew Phillips screws -1- and pull coil connector with slip ring -2- off the steering wheel.



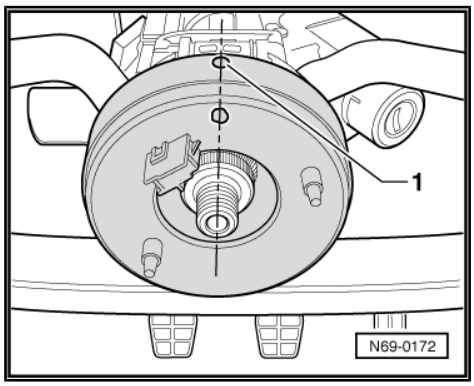
The following work sequence is valid only for vehicles with Electronic Stabilisation Programme -ESP-

Vehicles with ESP are additionally equipped with the steering angle sender -G85- . The sender is installed in together with the coil connector and slip ring in a housing.

– Front wheels and steering wheel must be in straight-ahead position.

– Position front wheels to straight-ahead position, if necessary, and remove steering wheel.

– Position steering angle sender to centre position.

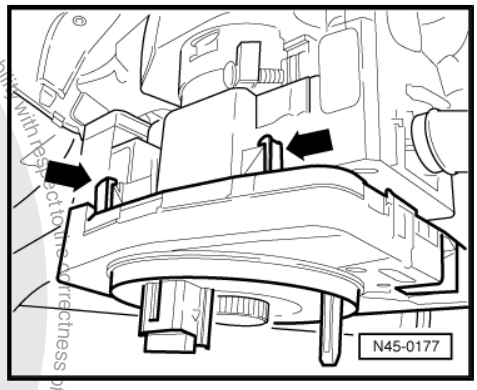


Note

- *Yellow spot must be visible in hole -1-.*
- *The markings must align.*

– Separate connector to steering angle sender -G85- .

– Carefully lift up hooks -arrows- and pull off steering angle sender.



3.12.2 Installing

– Installation is carried out in the reverse order.

For vehicles with -ESP- additionally observe the following

When installing steering angle sensor, ensure component is correctly seated and is free of stress.

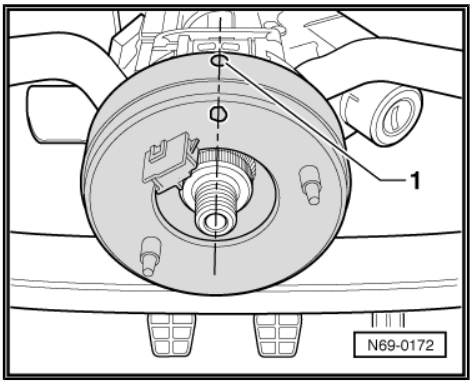
– Front wheels and steering wheel must be in straight-ahead position.

– Remove transportation protection on markings before installing a new steering angle sender -G85-.

– Fit steering angle sender -G85- until lugs engage.

satelettronica

– Position steering angle sender -G85- to centre position.



Note

- *Yellow spot must be visible in hole -1-.*
- *The markings must align.*

– A zero calibration procedure must then be carried out ⇒ Running gear self-diagnosis for ABS; Rep. Gr. 01 ; Carry out self-diagnosis, introduce basic setting

3.13 Removing and installing passenger side airbag unit ▸ 09.99 (without glove box)

Note

- *Obtain radio unit code before disconnecting battery.*
- *After reconnecting the battery, ensure vehicle equipment (radio, clock, electric windows) are checked as per Workshop manual/Owner's manual.*

3.13.2 Removing

WARNING

Disconnect battery earth strap before working on electrical system.

– Unscrew cross-head screws -3- from passenger side storage compartment -4-.

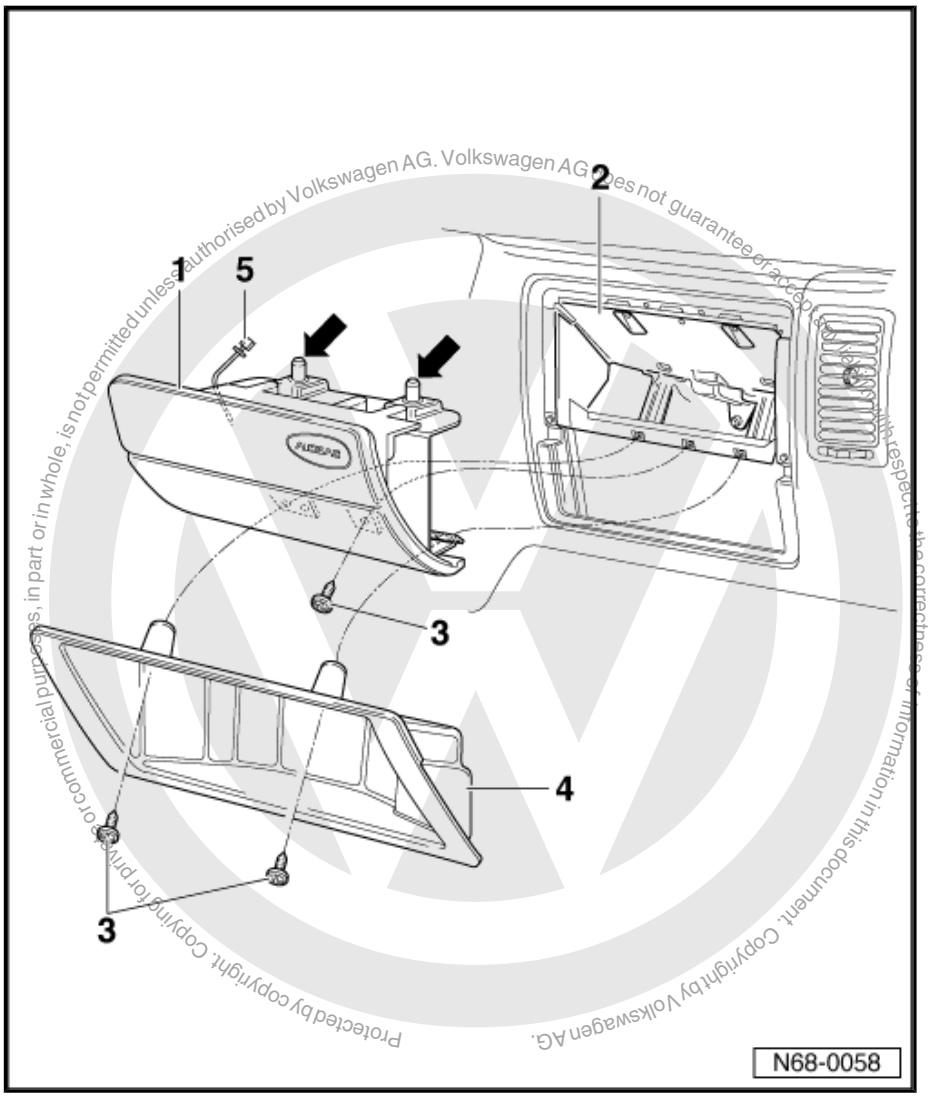
– Remove cross-head screw -3-. Pull the airbag unit -1- out of the lower section of the dash panel and remove it from the supporting frame -2- (pay attention to the upper studs -arrows-).

WARNING

Electrostatic discharges may result in unintentional triggering of airbag. Therefore, the mechanic must electrostatically discharge him/herself before disconnecting the igniter and earth wires. This can be done by briefly touching the body or striker plate of the door.

satelettronica

– Separate airbag unit connector -5-.



3.13.3 Installing

Installation is carried out in the reverse order.

– Switch on ignition.

> ⚠ WARNING
>
> *Ensure that nobody is in the vehicle.*

– Connect battery earth strap.

satelettronica

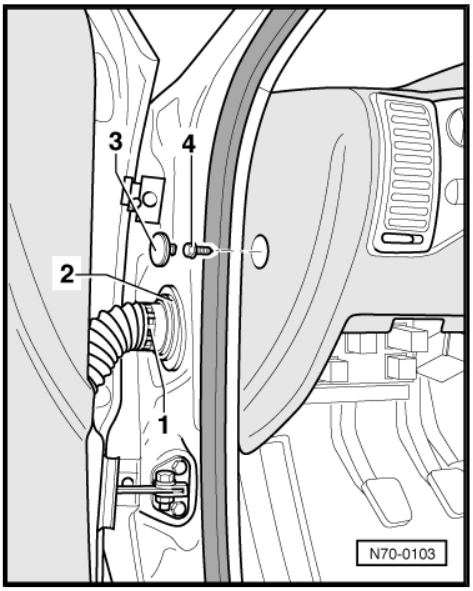
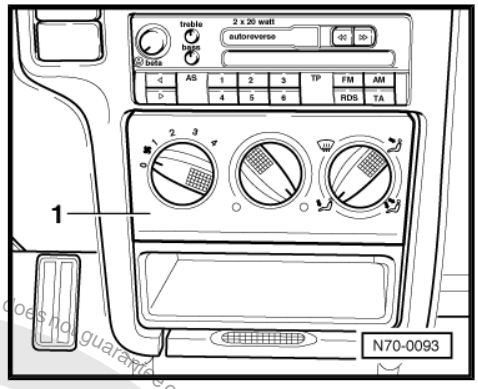
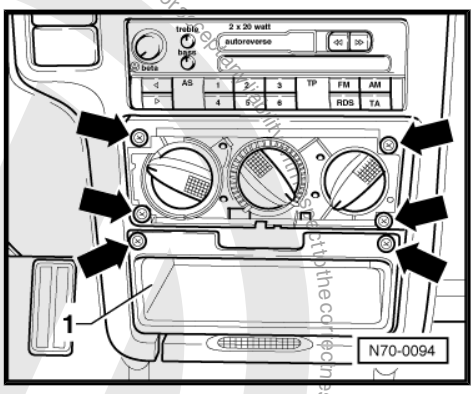
– Unplug multi-pin connector -1- on A-pillar (using commercially available hook wrench) ⇒ page 65 .
– Unscrew securing ring (bayonet lock) -2-.
– Lever off cap -3-.
– Unscrew hexagon head bolt -4-.



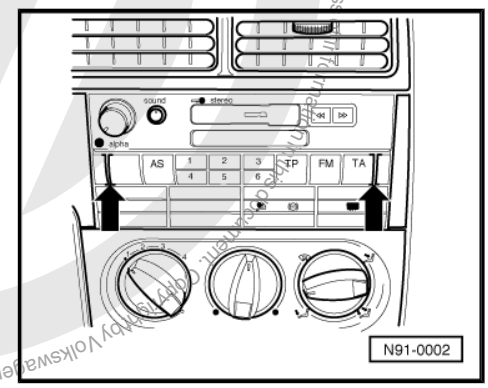
– Unclip trim -1-.



– Remove cross-head bolts -arrows-.
– Depending on equipment version, pull out storage compartment -1- or remove trim with switches (for seat heating and electric window actuators) and disconnect connectors.



– Slide radio release tool -3316- into release slots -arrows- until they engage.

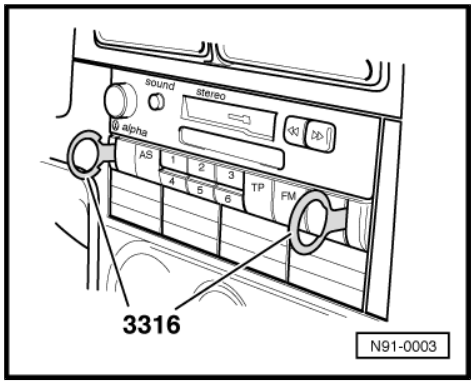


Note

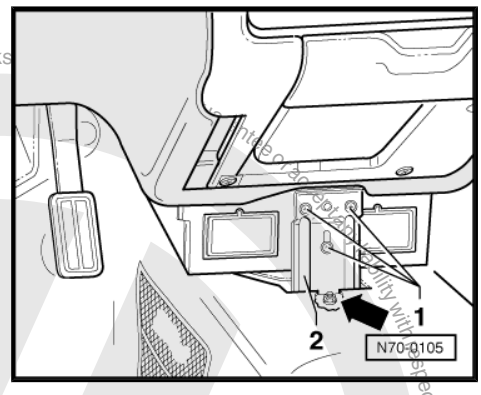
- *When doing this the radio release tool -3316- must not be pushed to the side or tilted.*
- *To remove release tools from radio, press locating lugs on sides of radio inwards.*

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or assume any liability with respect to the correctness of information. Copyright by Volkswagen AG.
satelettronica

– Pull radio out of the dash panel using the grip rings of the release tool.

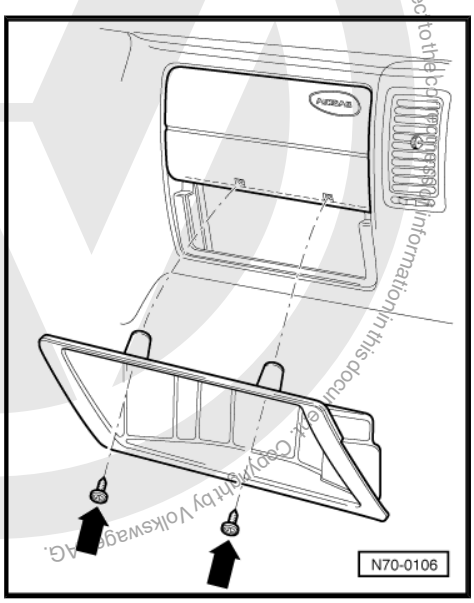


– Remove cross-head screws -1- (1.5 Nm).
– Unscrew hexagon nut -arrow-.
– Remove support -2-.

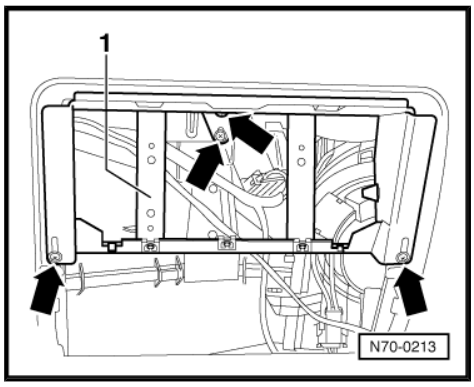


Vehicles with passenger airbag

– Remove footwell vent ⇒ Heating, air conditioning; Rep. Gr. 80 ; Repairing heating .
– Pull multi-pin connector from airbag control unit -J234- ⇒ page 58 .
– Remove bolts -arrows-.
– Pull front passenger side compartment out of dash panel.
– Vehicles with glove box ⇒ page 16 .
– Remove front passenger airbag unit ⇒ page 51 .



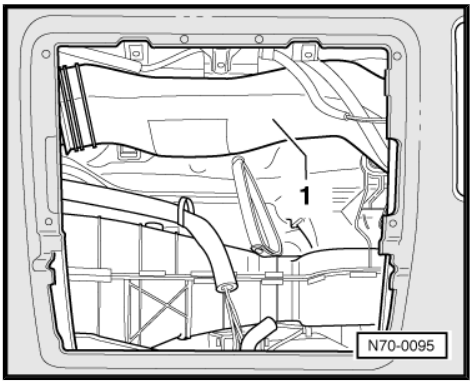
– Remove cross-head bolts -arrows-.
– Pull passenger airbag bracket -1- out of dash panel.



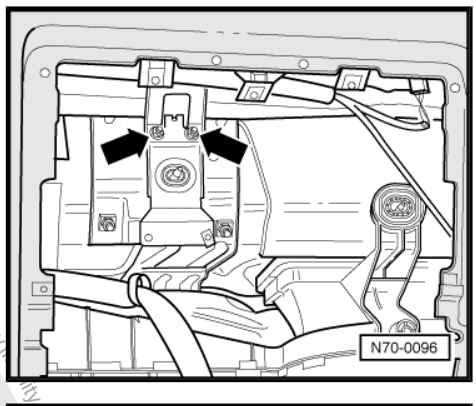
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volks
Copyright by Volkswagen AG.
satelettronica

Continued for all vehicles

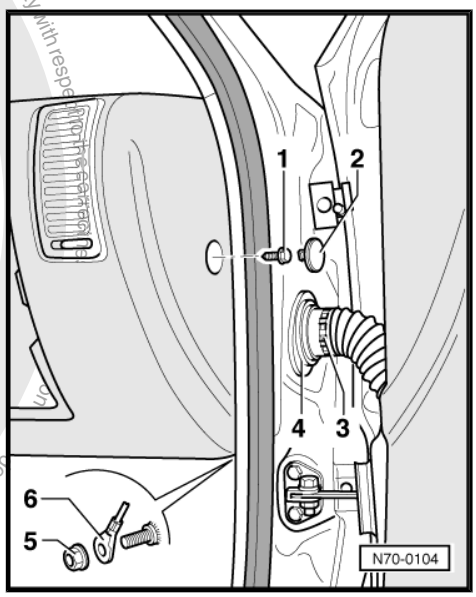
– Remove right air duct -1-.



– Unscrew hexagon nuts -arrows-.



– Unscrew hexagon nut -5-.
– Remove ground lead -6-.
– Unplug multi-pin connector -3- on A-pillar (using commercially available hook wrench) ⇒ page 65 .
– Unscrew securing ring (bayonet lock) -4-.
– Lever off cap -2-.
– Unscrew hexagon head bolt -1-.
– Lift out dash panel.



1.2.2 Installing

Installation is carried out in the reverse order.

Note

If the airbag warning lamp (K 75) signals a fault after assembling then the fault memory must be erased and interrogated again with fault reader -V.A.G 1551- ⇒ Body self-diagnosis; Rep. Gr. 01 ; Self-diagnosis for airbag systems .

Installation is carried out in the reverse order.

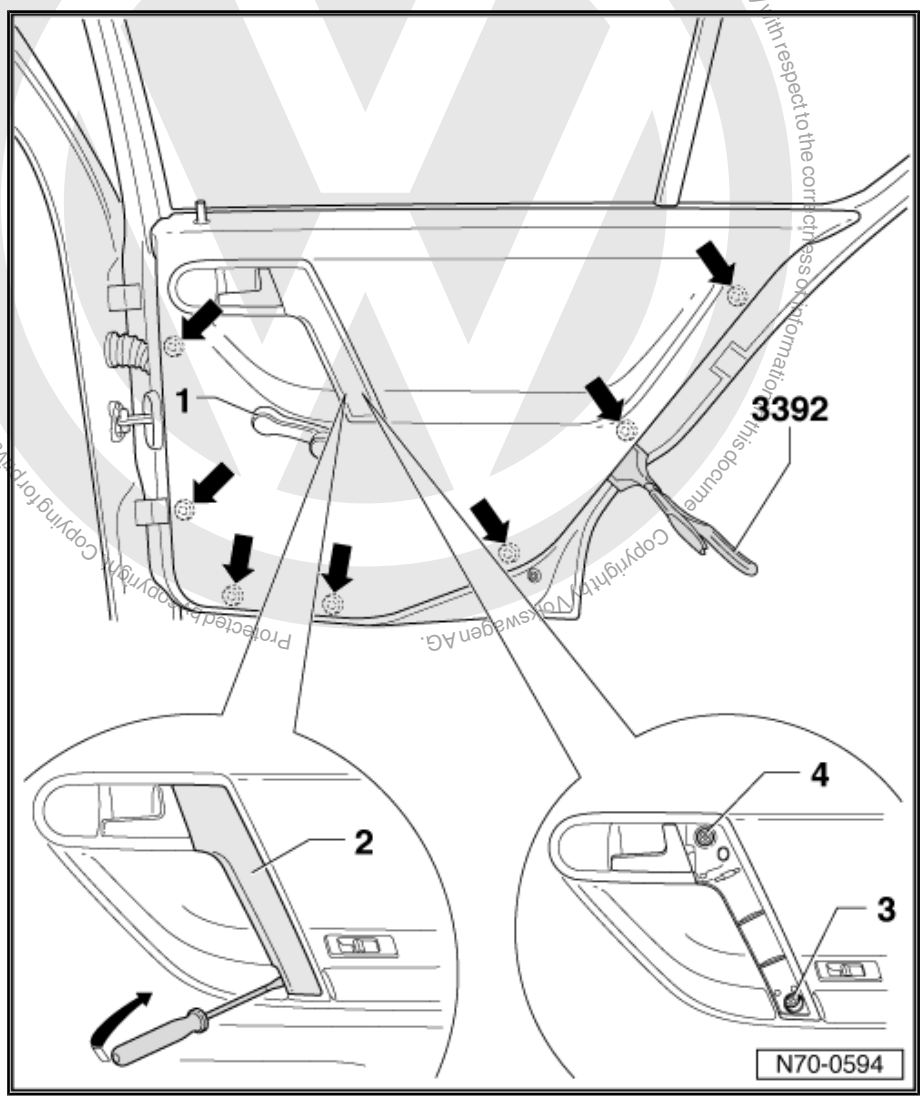
– Install window crank 10.99 ▸ ⇒ page 89 .

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

Note

Before installing trim, check clip connections and renew as necessary.

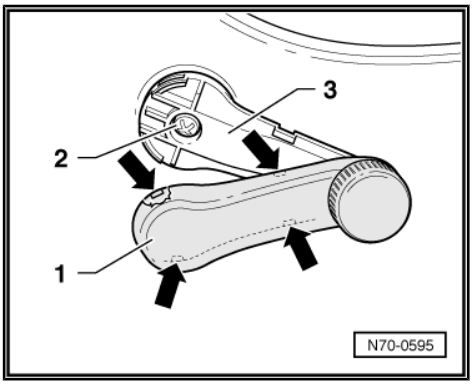


satelettronica

2.9 Removing and installing rear door window crank 10.99 ▸

2.9.1 Removing

– Loosen locking lugs -arrows- for trim -1- and swing trim down.
– Remove bolt -2-.
– Pull window crank -3- off from drive.

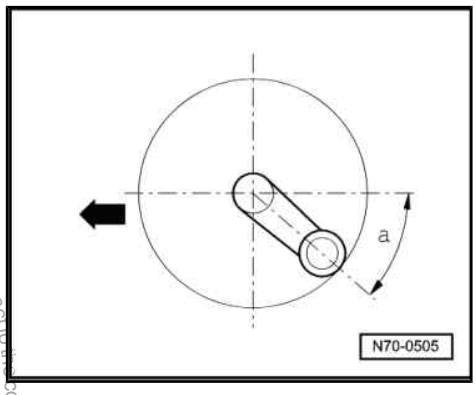


2.9.2 Installing

Note

- *The installation position with window closed is a = 45° ± 12°.*
- *The -arrow- in the figure indicates direction of travel.*

– Place window crank onto drive in installation position.
– Secure window crank with bolt and clip trim on.



2.10 Removing and installing door insulation film

Insulation films serve to seal the vehicle's interior against noise, water ingress and drafts.

Noise insulation film can be pulled off and repositioned up to four times without applying additional adhesive, as long as the insulation film is undamaged.

Replacement insulation film was supplied ▸ 02.95 with self-adhesive properties.

Replacement insulation film from 03.95 ▸ is supplied without self-adhesive properties.

These replacement films are bonded with adhesive sealant -D 469 101 A3- .

Adhering surface: hatched area

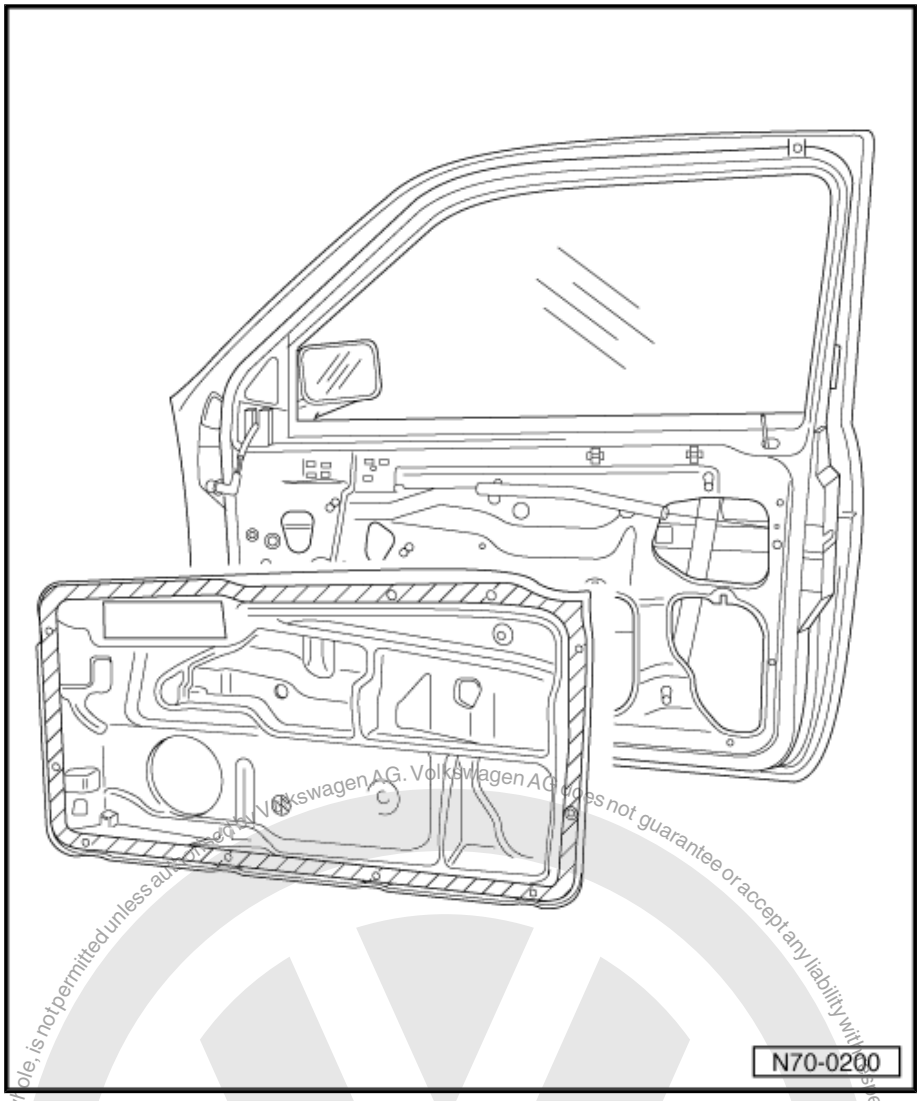
satelettronica

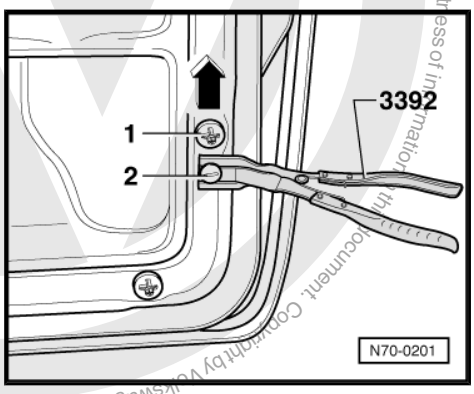


2.10.1 Removing

– Removing door trim ⇒ page 78 or ⇒ page 84 .

– Remove clip upper parts -1- -arrow-.

– Press clip lower parts -2- from door using removal pliers -3392- .



Note

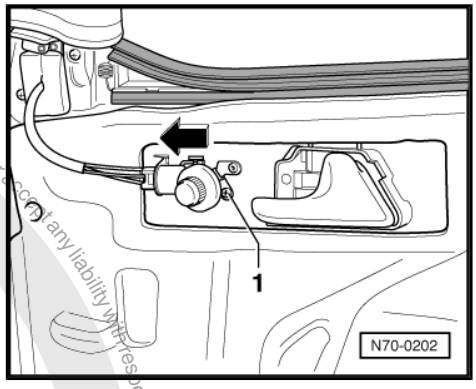
Check condition of clip lower parts and renew when installing, if necessary.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Vehicles with mechanical mirror adjustment

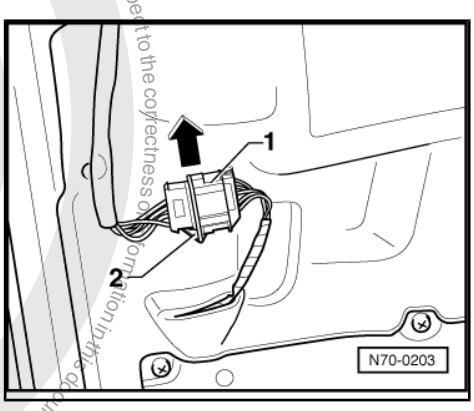
– Remove cross-head screw -1-.

– Press mechanical mirror adjustment out of fastening apertures in -direction of arrow-.



Vehicles with electric mirror adjustment

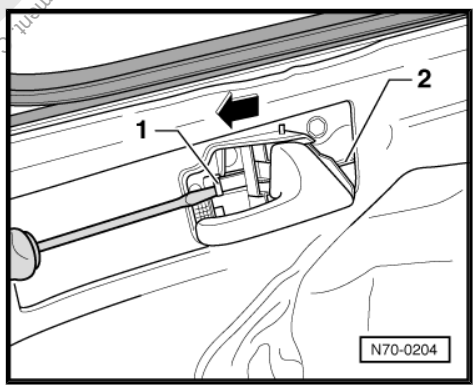
– Pull connector for electric mirror adjustment -1- out of bracket -2- in -direction of arrow- and separate.



Continued for all vehicles

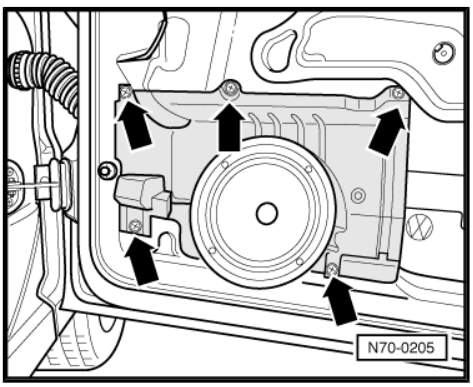
– Raise securing tab -1- with a screwdriver, press interior actuation out of fastening apertures in -direction of arrow-.

– Unhook linkage -2-.



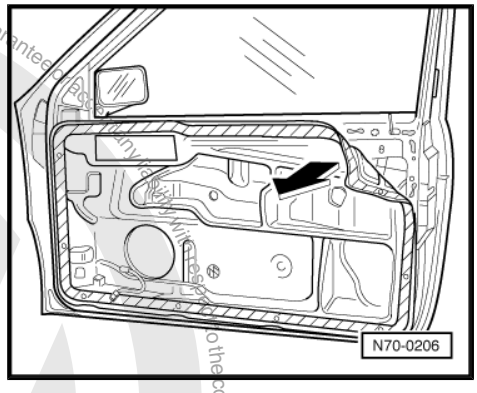
– Remove cross-head bolts -arrows-.

– Remove door speaker with cover and pull connector from speaker.



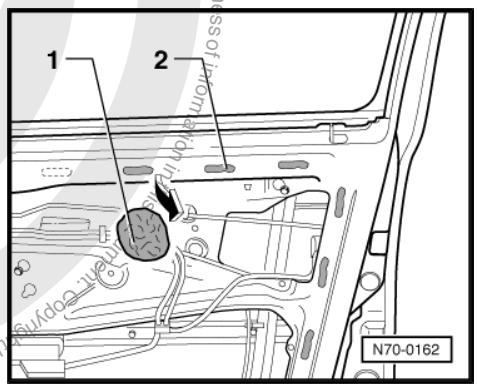
Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

– Pull off insulation foil around circumference in sections (each approx. 15 cm). When doing this, hold film as close as possible to the adhesive (shaded area).



2.10.2 Installing

– If renewing noise insulation film, remove remaining adhesive on door -2-. To do this, first pull off a small section from the door and form a ball. Using this ball -1-, remove remaining adhesive from door. (Adhesive property of glue is stronger than bond with door.)



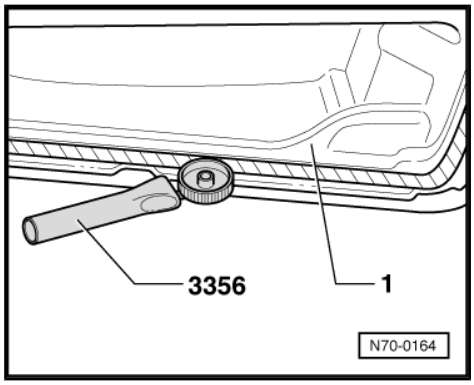
Replacement insulation film ▸ 02.95

– Insert electrical wiring connections of door inner parts (window regulator, loudspeaker and mirror adjustment) and operating rod through film and pull off protective strip of adhesive material.

– Align insulation film to apertures for assembly of fastening clips and press on.

– Press insulation film -1- bonding area (hatched area) onto door all around with roller -3356- .

– Particularly in lower area, check that insulation film is firmly adhered to door.



Replacement insulation film 03.95 ▸

– Using cartridge gun -V.A.G 1628- , apply adhesive sealant -D 469 101 A3- (adhesive bead ∅ approx. 5 mm) to circumference of insulation film -1- (hatched area).

– Insert electrical wiring connections of door inner parts (window regulator, loudspeaker and mirror adjustment) and operating rod through film.

– Align insulation film to apertures for assembly of fastening clips and press on.

satelettronica

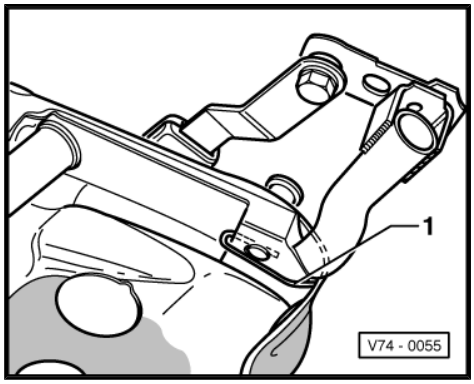
1.2.2 Removing

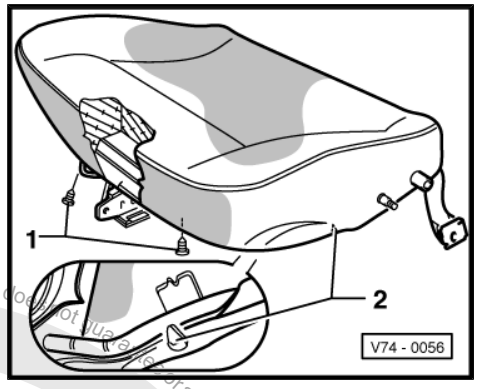
– Unhook left and right tensioning wire -1-.



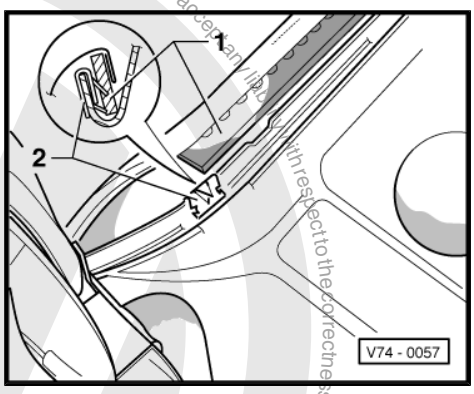
Note

When hooking in, tensioning wire -1- must be pulled slightly.

– Lever out clips -1- and bend out fasteners -2- on left and right.



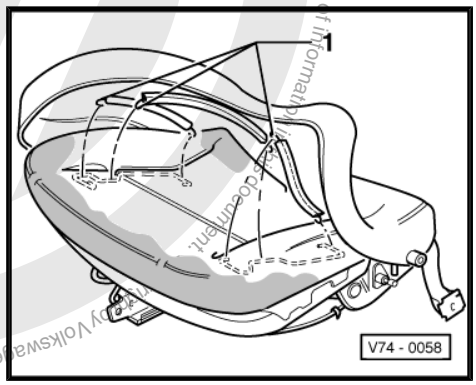
– Release clamping strip -1- from seat base.



Note

Depending on the seat design, the clamping strip -1- may be secured by the clips -2-.

– Fold cover up until padding wires -1- become visible.
– Detach padding wires -1- with awl -V.A.G 1636- and pull off cover.
– Remove padding from seat frame.



1.2.3 Installing

– Installation is carried out in reverse order of removal.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Note

To aid installation, heat up cover to approx. 30 °C.

1.3 Removing and installing front backrest cover and padding

1.3.1 Assembly overview

1 - Seat cover

- ❑ Removing:
  - – Remove backrest ⇒ page 137 .
  - – Remove seat cover and padding ⇒ page 147 .
- ❑ Fitting ⇒ page 148 .

2 - Tensioning wire for cover

3 - Padding wire

- ❑ Attached into padding; attach and detach using awl -V.A.G 1636- .
- ❑ In sport seat, additionally secured with padding clips.

4 - Guide

- ❑ To remove, push up cover, press ends of guide together and pull out

5 - Clip

- ❑ Renew if damaged by removal.

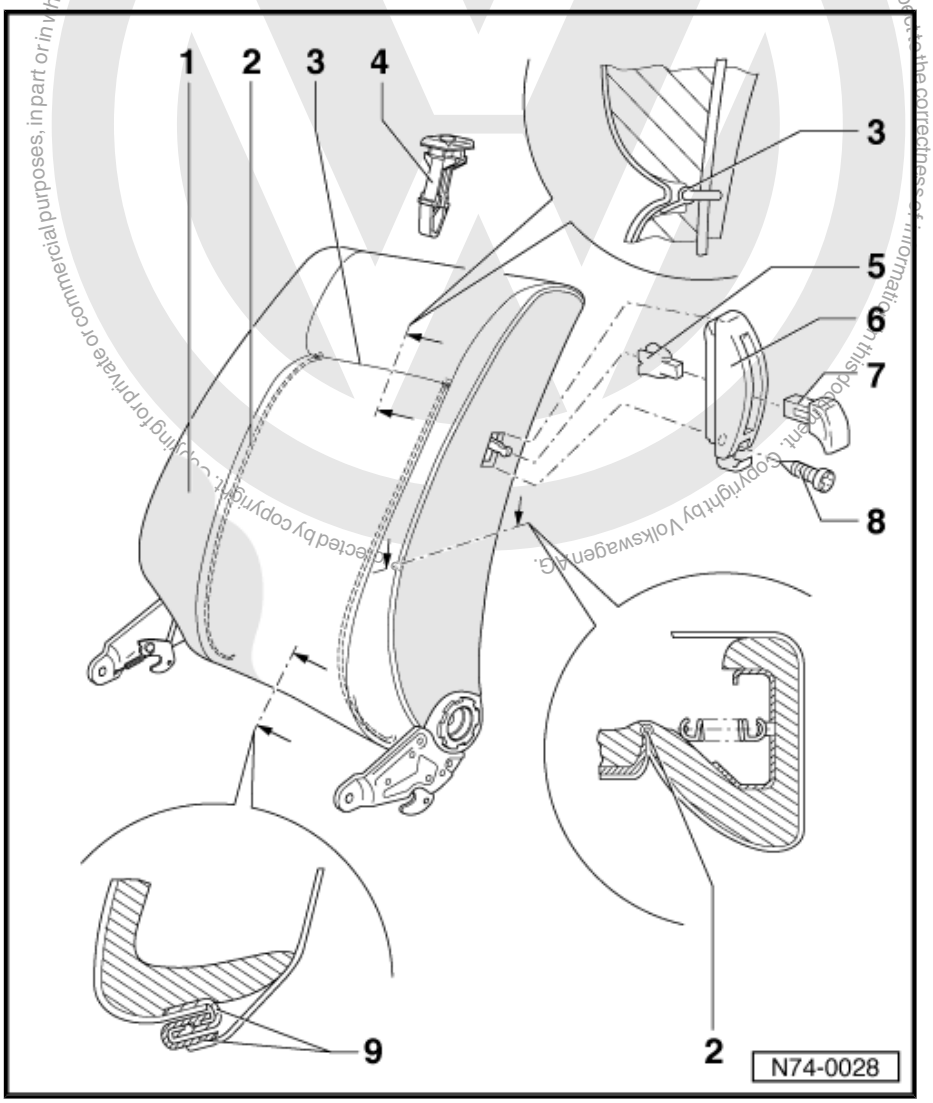
6 - Trim

7 - Operating handle

- ❑ Pull off.
- ❑ Renew if damaged by removal.

8 - Cross-head screw

9 - Clip profile



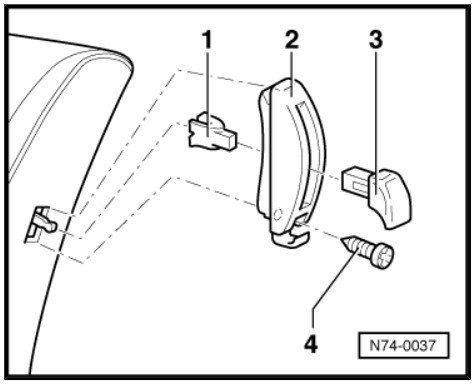
1.3.2 Removing upholstery and padding

– Remove backrest ⇒ page 137 .

– Remove head restraint from backrest.

satelettronica

– Pull operating handle -3- from backrest release (two-door vehicles only).



Note

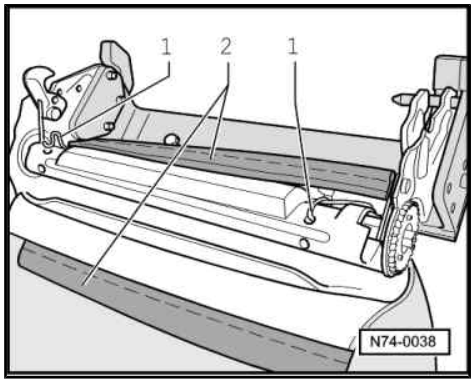
If operating handle -3- or respective clip -1- is damaged, replace during installation.

– Unfold cover for cross-head screw -4- at trim -2- and unscrew cross-head screw.

– Pull off trim -2-.

– Loosen clip profiles -2- from each other on underside of backrest.

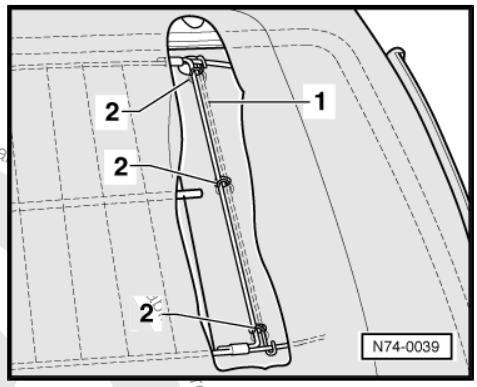
– Unhook tensioning wires -1- (sport seat only).



– Pull off upholstery up to padding wire -1-.

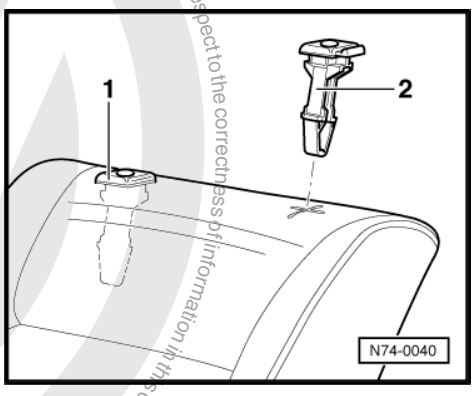
– Nip through padding clips -2- (sport seat only).

– Detach padding wire -1- (on front side of backrest) using awl -V.A.G 1636- .



– Press together lower ends of guides -1- and -2- for headrest and pull out of backrest frame.

– Take off upholstery and padding with underlay from backrest frame.



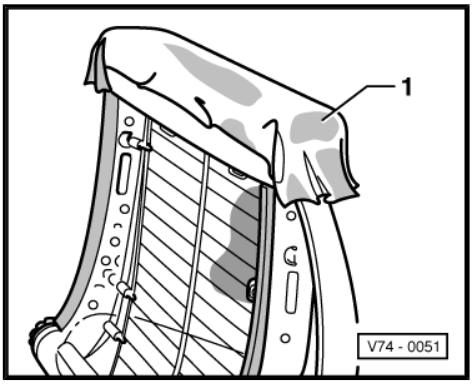
1.3.3 Fitting upholstery and padding

– Place underlay and padding onto backrest frame.

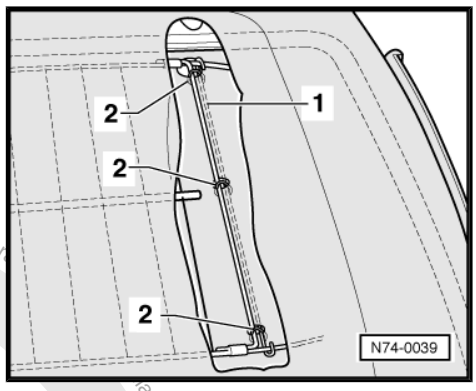
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

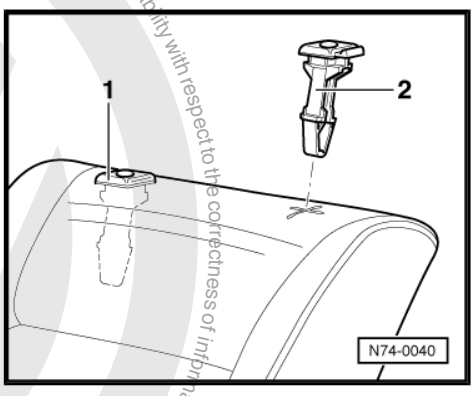
– Place sliding cloth -1- to facilitate fitting upholstery onto top edge of padding.
– To facilitate installation, heat upholstery to 30 °C.



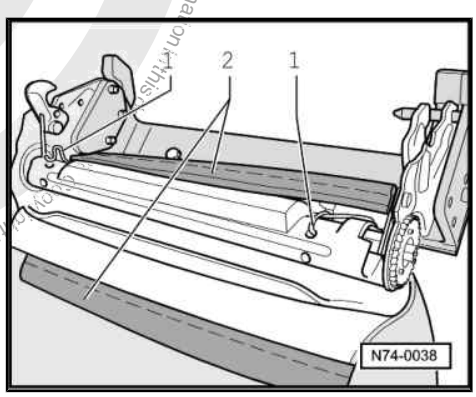
– Draw backrest upholstery on until ends of padding wire -1- can be guided through padding and attached to backrest frame.
– Install padding clips -2- with upholstery clip pliers -V.A.G 1634- (sport seat only).
– Pull backrest upholstery on completely.



– Install guides -1- and -2- for headrest. (Guide -2- with push-button on left in direction of travel).



– Attach tensioning wires -1- (sport seats only).
– Join clip profiles -2- on underside of backrest.
– Complete backrest with headrest and operating handle with trim (two-door vehicles only).



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this repair manual.
